PROJECT:

Topic:

”SKIN DISEASE DETECTION USING IMAGE PROCESSING AND CNN”

Description:

Detection of skin diseases is a very important step to reduce death rates, disease transmission and the development of the skin disease. Image processing techniques help to build automated screening system for dermatology at an initial stage. The extraction of features plays a key role in helping to classify skin diseases. In this research the method of detection was designed by using pretrained convolutional neural network (AlexNet) and SVM.
